

METAREX[®]

MICRO

Mini Baits for Maxi Slug Control

WHY PROTECT CROPS AT SOWING?

- Young shoots are extremely attractive to slugs
- Slug populations tend to increase in minimum tillage or no till practices
- Post sowing, soils are not always compressed therefore more potential for slug damage
- Early slug bait applications are most effective

WHY CHOOSE TO MIX BAITS WITH THE SEED

- Sometimes no additional baiting required.
- Ease of application
- Protects germinating seeds in furrow
- Protects seed from drill slot closure issues

End of the trail for slugs and snails

Benefits:

- ✓ MAXI Attractiveness
 - ✓ MAXI Palatability
 - ✓ MAXI Protection in furrow
 - ✓ MAXI Rainfastness
 - ✓ MAXI Bait points
 - ✓ MAXI Even mixing with seed
- = MAXI slug control**
- ✓ MINIMUM Environmental issues
 - ✓ MINIMUM Dust
 - ✓ MINIMUM Impact on earthworms
 - ✓ MINIMUM Impact on slug predators
 - ✓ MINIMUM Wear & tear on equipment

METAREX[®]

MICRO

Mini Baits for Maxi Slug Control

WHY CHOOSE METAREX MICRO?

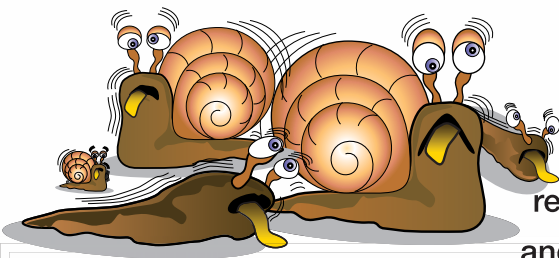

- ✓ Outstanding slug control
 - ✓ Even bait size
- ✓ Density very close to seed size
- ✓ Approx 110,000 baits per kg
- ✓ Ideal to blend with seed for ultimate seedling protection
- ✓ 'Wet process' bait with long field life no matter what the weather
- ✓ Little impact on beneficial insects eg Carabid Beetles and earthworms
- ✓ Metarex Micro gives largest count of baits per linear metre

APPLICATION RATE:

In furrow or broadcast with seed.

Metarex Micro @ 3-4kgs/ha (330,000-440,000 baits/ha)
mixed with seed for protection of germinating seeds.

A broadcast application of Metarex may also be
required at 4-6kgs/ha under medium to high slug pressure
and especially if crop is highly susceptible to slug damage.
